Commissioner Deborah Taylor Tate

Dear Commissioner Tate,

The airwaves belong to the public, not corporations like Verizon and AT&T whose anti-competitive practices have resulted in the U.S. falling to 16th in the world in high-speed Internet rankings.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

Sincerely,
Marianne, Rich and Lisa Laurito

Washington, DC 20554

Dear Federal Communications Commission,

As the proud owner of an iPhone, I will be the first to say that this revolutionary device could be even more ground-breaking were it not locked to one wireless service provider. The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T to shackle great gadgets to their closed networks. The potential speed and range of content and applications available over the iPhone is quite limited, and AT&T has a financial incentive to keep it that way. It's up to you to stand up for the public interest in free competition and better service.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market, making WiFi available to everyone and giving a boost to entrepreneurship and creativity.

Sincerely,

Malcolm Kenton

Dear Federal Communications Commission,

The iPhone is another example of innovation that gets locked in to self-interest. Phone companies want to control how we receive content. Why should they always control our 'Free' access to information. We pay our monthly charges. We pay for Text messages, We pay for using photos. It never ends.

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:
